Arithmetic Over/Underflow Exercise 4

Intro

A new token has been deployed!

The deployer minted for himself 1 million tokens and you have nothing 😟

Can you hack the smart contract and create tokens for yourself out of air?

Accounts

- 0 - Deployer & Owner
- 1 - Attacker (You)

Tasks

Task 1

Find a way to exploit the smart contract so you will have more tokens than the initial supply (1 Million).

Task 2

Create a secured version of the contract so you won't be able to exploit it.
